

Thank you for purchasing a Gateway Certified Reconditioned Product.

Gateway strongly recommends that you create back-up media that will allow you to restore your system's software in case of a future hard drive failure. There is a fee for ordering restoration media from Gateway if you do not have your own back-up.

1. From the Windows Start Menu, choose Gateway Recovery Center in the Programs list.
2. In the next window that appears, select 'Applications and Drivers External Media'.

3. Follow the on screen instructions to create a CD or DVD of your system's application software and hardware drivers.

Keep this and your Operating System disk in a safe place for future needs. For further product information, see www.gateway.com/support
